

WILLIAM C. WOODALL, III, MD | E. CARTER MORRIS, III, MD | SAMUEL R. BOWEN II, MD | BENJAMIN BANKS FULMER, MD

CARPAL TUNNEL SURGERY

Post Operative Instructions

What You Should Expect....

- For several days your hand may throb if it is not elevated
- Gently moving fingers and wrist will help to prevent stiffness
- You will have stitches that will be removed in 14 days

Following Surgery....

- Your hand must stay dry for 14 days.
- Keep incision covered at all times with dry gauze dressing.
- Do not apply ointments or creams to the incision.
- Do not put pressure on wrist or lift with affected hand.
- Taking two ibuprofen (Advil®) every four hours will help with pain control.
- You may drive after one day.
- Keep your hand elevated on pillows for first 24-72 hours to decrease the swelling and discomfort.

You Should Call the Office If.....

- There is redness or swelling of incision
- There is more than a small amount of blood tinged drainage, or drainage appears to have pus (infection)
- Temperature greater than 101.5°
